

1. When a user clicks “Account Details” button in Account record page, it shows Account Name, Account Type and Account Rating Using “Screen Flow” (This Screen Should be visible to Platinum Tier Account only)

- ❖ First, we have to Create a Custom Picklist field on Account Object Names as **Account Tier** with these values Gold, Silver and Platinum.

Flow:

Result:

- In the Screen element I have use Display Text to show the Account Name, Type and Rating.
- Then I have Create a Variable of Account Record which is used to fetch Account record field values to show in the screen.
- Then I have use decision element to decide whether the account is with Platinum Tier or not, if it is platinum show the screen to user else don't show the details to user.
